## Premier Tent Heaters

Tent Series

*L.B. White Premier gas fired heaters provide a safe and efficient source of warmth for your tented events.*

*These heaters set up quickly and are exceptionally quiet during operation. Thermostatic control assures you of a consistent, comfortable temperature. And, with a flip of a switch, the Premier heaters can be used to circulate unheated air in your tent.*

*The Premier 80 is an 80,000 Btuh heater, the Premier 170 gives you 170,000 Btuh of heat and the 350 provides 350,000 Btuh. All heaters are fully ductible and are available in propane or natural gas models.*

### Portable Gas Fired Heaters

#### Simplicity

L.B. White tent heaters are easy to set up and even easier to operate. The heaters use L.B. White's direct spark ignition system for dependable start up. Just place the toggle switch to heat, set the thermostat, and the Premier heaters will do the rest. A remote thermostat with a 20 foot cord allows easy temperature adjustment whether the heater is inside or outside the tent. A self-diagnostic control system and LED make it easy to identify and correct any problems.

#### Safety

The Premier 80, 170 and 350 are the proven market leaders for tent heating. The Premier heaters are design certified by International Approval Services to the stringent standards of both the American Gas Association and Canadian Gas Association for portable, temporary heating. These certifications ensure that your Premier heater will meet or exceed industry standards for safety and quality of construction. An agency report evaluating the Premier heater in the tent-heating environment is available from L.B. White for use by local inspection authorities.

#### Versatility

Our new heaters are versatile enough to heat a tent of any size in virtually any kind of weather. L.B. White provides a handy tent sizing guide to assist you in determining the number of heaters for each situation. Also, our tent heaters may be used for both warming or simply circulating the air. Premier heaters are certified for use with ducting and air diffusers and can be readily placed outside the tent if you wish.

*Quality heaters you can count on.*

L.B. WHITE

Your local L.B. White Dealer:

# Premier 80, 170, and 350

Since 1952, L.B. White Company has made sure of one thing. Product after product, year after year, we provide our customers with high quality, reliable heaters that exceed expectations when it comes to performance and safety. With over 40 years of successful heating experience, we're the leader in tent heating. At L.B. White, we understand your needs are always changing. That's why we're constantly improving. Always looking for better, more efficient and easier ways to help you get the job done. So you know you can always count on L.B. White for your heating needs.

## Air Distribution Options:

Tent Heaters from L.B. White are available with accessories that enable you to use ducting or a diffuser. Diffusers allow you to place the heaters outside the tent with a wide register that distributes the air at ground level. Ducting allows you to place the heater outside the tent and distribute the heated air through a tubular

duct which is inserted into the side wall of the tent. The 12 foot long duct compresses to a convenient 3 foot length for storage and transportation.

### Model Numbers:

Diffuser-Premier 80	09389
Diffuser-Premier 170	09396
